

The diagram illustrates the training phase of the AF3 model, showing a cycle between three main components:

- Collective Variable Space:** A 2D plot with axes showing a distribution of points (black dots) within a blue shaded region, representing the initial state space.
- Conformation Set:** A 3D visualization of a protein structure (red and blue) representing the sampled conformations.
- Pseudo AFM Image:** A stack of images showing a bright, curved shape (yellow/orange) on a black background, representing the simulated AFM data.

The process flow is as follows:

- An arrow labeled **AF3** points from the Collective Variable Space to the Conformation Set.
- An arrow labeled **Emulate** points from the Conformation Set to the Pseudo AFM Image.
- An arrow labeled **Estimation by g-CNN** points from the Pseudo AFM Image back to the Collective Variable Space, passing through a neural network diagram (g-CNN) that processes the image data.
